

## Green Algae (Chlorophyta)

*Ulva lactula*  
**Sea Lettuce**

- single sheet
- thickness of tissue paper

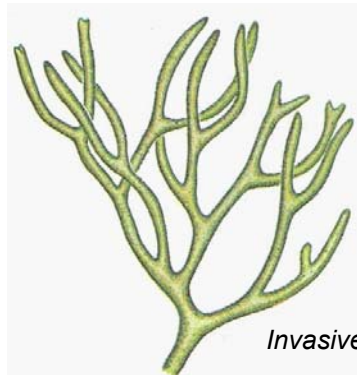

*Monostroma sp.*  
**Thin Sea Lettuce**

- single sheet , ruffled
- thinner than *Ulva* - thickness of cellophane

*Enteromorpha sp.*  
**Hollow Green Weed**

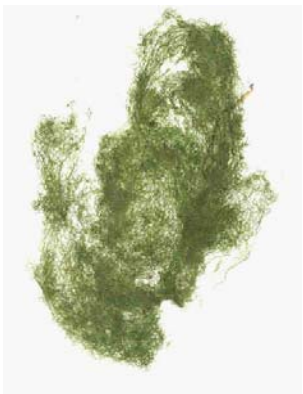

- long, green tubes
- single or in tufts (some species branch)
- found esp. in upper intertidal

*Codium fragile*  
**Green Fleece**

- thick, succulent branches
- textured surface
- typically 4-12 inches long

*Invasive* ☐

*Ulothrix sp.*  
**Green Cotton Weed**

- thin , filamentous strands tangled together
- texture like cotton balls
- no branching

*Cladophora sp.*

- green filamentous tufts
- minute branching (under hand lens)
- softer than *Acrosiphonia*

*Acrosiphonia sp.*  
**Green Rope Weed**

- branches often tangled into distinct rope-like strands (left)
- green filamentous tufts (below)
